

Case Study Desktop As A Service AWS Workspace

Customer -DirectLS

DirectLS Requirement

Our Supporting partner (DirectLS) customers' in Oil Field - Client had a requirement to provide remote access to five users: 1) client-facing and office-based users who don't have laptops and needed to be able to access emails, files and their and core applications in the event of business interruptions.

Solution

Pinnacle Smart Technologies designed a remote access solution utilizing Amazon Workspaces connectivity from client's on-premise network to an AWS VPC with authentication against Active Directory integrated into the client's on-premise authentication platform's Workspaces running Windows 10 aligned to the client's corporate standards and connecting to email via Office 365 directly over the internet and core on-premise applications via a secure AWS Workspace Client.
